

## TECHNICAL SALES MANAGER

(based in Klaus  
+ frequent travel in France / Europe)

We are looking for a highly motivated

# Technical Sales Manager (f/m) France

Your technical competence, your knowledge of the French OEM and supplier markets will help you to identify and to focus on the competitive advantage of our core products. Your main focus will be to develop and support new applications and acquisitions. Building an extensive network at our customers is a base for our success. Excellent project management performance will be paving your way to new opportunities. In close cooperation with the Key Account Manager and a cross-functional team you successfully implement our business development with the French OEMs. Frequent travelling (50%) to the sites of our international manufacturing plants, engineering centers and headquarters will be mandatory.

### TASKS

- technical sales management and prime contact for customers
- customer project management
- coordination of advanced engineering projects
- market- and competition research

### PROFILE

- Your profile: a degree in industrial or in mechanical engineering and/or a proven track of experience (preferably a minimum of 3-5 years in the automotive industry)
- experience with customer RENAULT / Nissan and/or PSA (advantage)
- knowledge of acoustical components, heat-management and aluminium manufacturing (advantage)
- knowledge of project management, time management and product development
- MS Office / MS Project
- Willing to travel frequently
- Self- confidence and very good communication skills
- Languages: fluent in **French, German** (corporate language: German) and **English**

Carcoustics is a steadily growing, international company with headquarters in Leverkusen. Originally active in the automotive industry, Carcoustics is in addition to the automotive industry also successfully active in other industrial markets. With around 1.400 employees worldwide, our products are produced in Europe, America and Asia and distributed and developed by our local sales and engineering teams. We are specialist for acoustic and thermal solutions, in addition our solutions often also include sealing functions, brace structures and reduce the weight, even limited package space is given.
